

**AMENDMENTS TO THE SPECIFICATION**

**Please replace the paragraph no. [0013] with the following amended paragraph:**

[0013] To accomplish the above object of the present invention, there is provided a pimple removal utensil comprising: a holder; a pressing portion in which a first extension and a second extension are formed, which correspond to each other and are branched off and extended from the holder; and a pimple insertion hole formed by narrowing an interval between the first and second extensions gradually as it reaches to distal ends of the first and second extensions.

**Please replace the paragraph no. [0016] with the following amended paragraph:**

[0016] It is preferable that an interval between the first and second extensions becomes narrow gradually as it reaches to distal ends of the first and second extensions. It is also preferable that the first and second extensions, in which an interval therebetween become narrow gradually, suppress a pimple with a lateral force as the pimple inserted into the insertion hole moves to distal ends of the first and second extensions according to the moving of the pressing portion along the convex curved surface of bottom of the pressing portion.
